Video Borescope

In hobby and professional use, some objects such as terminal ports, electronic components, breaks, constrictions, cracks or other components often must be located and examined in „hard to reach“ locations.

This new video borescope-camera offers a number of excellent technical properties, such as the detachable display connected by video cable or the high resolution camera with 6 dimmable LEDs for illumination, which can store photos and videos on a micro SD card. In addition, the diameter of the flexible camera is with only 8,2 mm small enough to get through the smallest vents and gaps.

Suitable for all applications, the wide camera viewing angle of 60°, as well as the automatic focus from 30 mm to „infinity“ ensures a clear view of the subject. All these features make this the camera endoscope the ideal companion of any electrician or service technician in the field, as well as an indispensable tool in any automotive or hobby workshop.

- Detachable, wired 3,5“ color TFT display
- HD 720p video recording and 3 megapixel photo function
- 4 GB Micro-SD card for recording
- 8,2 mm camera with 6 LEDs for dimmable lighting
